

Press Release

Shadow and sun protection

Extra large golf umbrellas are not only useful on the golf course as shade and as rain protection. With a new reflective PU-metallic coating, they now also provide excellent sun protection with a UV protection factor (UPF) of 50+.

They therefore offer more than five times higher UV protection than, for example, a sun hat with a wide edge (UPF approx. 5) and are still well above the sun protection factor of dense cotton clothing (approx. 40). The special metallic coating also very effectively reflects the sunlight. This means that it remains much cooler under these umbrellas than under umbrellas with conventional canopy.

The umbrellas were developed by the traditional "umbrella-smith" Eberhard Goebel. The special golf and partner umbrellas of the birdiepal® brand enjoy high prestige on many greens of the world because of their outstanding material and processing quality. Almost unbreakable and highly durable glass fibre frames, extremely tear-resistant polyamide or polyester canopies with double seams between the umbrella segments, easy-going and injury-free opening and closing mechanisms, safety tips and the hand-friendly handles made of high-density profiled foam are typical features of these high-quality umbrellas. Their low weight is also especially appreciated by ladies.

Unlike many conventional large umbrellas, the birdiepal® umbrellas are constructed as "single canopy" umbrellas, i.e. with a continuous canopy. Compared to double canopy umbrellas, this not only provides stability benefits, but also weight savings - and: the rain actually stays out there and cannot get inside between the different panels.

The special golf umbrella range with UV coating comprises four models of the birdiepal® range: From the large partner umbrella birdiepal rain with a comfortable diameter of 152 cm to the lightweight birdiepal lightflex umbrella, which with a diameter of 132 cm only weights 456 g, from the birdiepal compact to the extremely wind-stable birdiepal windflex, whose patented special design ensures that it cannot be turned inside out by even the strongest wind.

More information:

Eberhard Goebel GmbH+Co.KG develops special umbrellas for demanding applications. The special trekking and golf umbrellas are unique in Europe. These are made of modern high-tech materials and offer the best functionality possible according to the current state of the art and suitable for the planned area of use. Their workmanship is exceptionally good and they are extremely stable and break-proof.

The special know-how of the internationally active and very successful company from Ulm, especially in the USA, in Europe and in Asia, is based on the wealth of experience of a family that has been developing and producing high-quality umbrellas for over 100 years.
